

BORESIGHT

*Highest alignment precision •
Simple operating concept •
Ruggedized •*

Operates without power

Direct sight: integrated reticle

No adjustments needed

Easy and quick to use

Other key features:

Customized calibre boresights and reticle available on request

Easy / flexible integration and commutable

BORESIGHT

Technical data

SMALL

The effectiveness of a gun depends substantially on the alignment of the gun barrel in respect to the aiming device. The better the alignment to each other the greater the chance of a hit with the 1st round.

The Nedinsco Boresight is used to check and if necessary correct the alignment of the gun with respect to the aiming device. The Nedinsco Boresight is the most accurate Bore-sight found on today's market.

Accuracy	0,2 mrad
Optical	
Magnification	8x
Field of view	5.6°
Diopter setting	± 4 dpt
Reticle	Range ± 10 mil Interval 0.5 mil
Telescope	Nitrogen filled
Environmental	Complies with MIL-STD-810
Temperature operational	-21°C ... +62°C
Dimensions	
Width x height x length Weight	44.5 x 110 x 380 mm 0.4 kg
Fixation in gun	Clamping mechanism which will adapt to the diameter of the gun
